SUMMARY

Full stack engineer with 3.5+ years owning production features end to end on Skinopathy OS, a healthcare SaaS EMR used in Canada and Malaysia (one Ontario clinic alone: 31,000+ patients, 50,000+ appointments). Delivers measurable results (50% faster APIs, 80% faster dashboards, sub-300 ms search), leads production releases, and raises code quality through review (184 PRs), automated testing and mentoring interns.

EXPERIENCE

Software Engineer (Full Stack), Skinopathy Inc., Toronto, ON — Feb 2023 – Present

Healthcare SaaS EMR sold to dermatology clinics in Canada and Malaysia · Next.js, Go, PostgreSQL, Python, Azure

- Cut API response times **50%** by designing and deploying RESTful Go (Gin) services on PostgreSQL behind the EMR's clinical workflows.
- Delivered **sub-300 ms** prescription search over large datasets with PostgreSQL trigram and full-text indexing, then led Prescriptions 2.0 (**~70 PRs**) across the EMR and patient portal, including re-prescribing from history and fax-to-pharmacy.
- Cut clinician documentation time from **hours to minutes** and **doubled encounter speed** by building the encounter-note editor and Slate.js templating engine, used for **23,000+ encounter notes** (~22 a day) at one clinic.
- Reduced admin dashboard load times **80%** with an AWS S3 thumbnail-generation pipeline for PDF previews.
- Shipped encrypted doctor-patient chat and video calls by integrating Azure Communication Services into the Go backend without SDK support, for a practice where **~75% of visits are virtual**.
- Introduced automated testing across the stack: **Vitest and Playwright** for the Next.js app (replacing Cypress) and Go unit tests for the backend and scheduling service.
- Built OHIP (Ontario health insurance) claim submission, response handling and fee-schedule parsing in a Python Azure Functions service, and delivered inventory and private-pay invoicing.
- Rebuilt outbound faxing from the patient chart on the SRFax API (multi-document bundles, cover letters, multi-recipient sends) and the react-pdf/pdf-lib pipeline behind printable chart documents (**~30 PRs**).
- Led **11+ production releases** in 2026 across 4 services (frontend, backend, scheduler, email), assembling QA branches and writing clinician-facing release notes.
- Authored **315 PRs** across 10 repositories, reviewed **184**, completed **197+ tickets** and mentored **~5 interns**; helped the team ship major features **15% faster**.

TECHNICAL SKILLS

Languages: Go, TypeScript, JavaScript, Python, SQL, Java
Backend: Gin, Node.js, Express.js, Spring Boot, Azure Functions, REST APIs, microservices, OpenAPI/Swagger
Frontend: React, Next.js, TanStack Query, Tailwind CSS, HTML/CSS
Data: PostgreSQL (full-text and trigram search), MySQL, MongoDB
Cloud & DevOps: Azure, AWS (S3, EC2), Docker, GitHub Actions, CI/CD, feature flags
Testing & Practices: Vitest, Playwright, Go testing, code review, release management, Agile, mentoring
AI-Assisted Development: Claude, Cursor, GitHub Copilot

PROJECTS & AWARDS

PDF Tools Prototype, Skinopathy interview project — Jan 2023

- React tool for PDF rotation and annotation (pdfjs-dist, pdf-lib); **promoted to production**.

Plate-Saver, DeltaHacks 8, Winner (MyPalate Inc. Challenge) — Jan 2022

- Android app (Java, SQLite) connecting restaurants with shelters for food redistribution.

EDUCATION

BSc, Computer Science, York University, Lassonde School of Engineering, Toronto, ON — Sep 2018 – Jun 2022

Lassonde Entrance Scholarship · Student Excellence Scholarship
