SUMMARY

Full stack software engineer with 3.5+ years building Skinopathy OS, a production EMR used by dermatology clinics in Canada and Malaysia. Owns clinical features across Next.js/React frontends, Go APIs and services, PostgreSQL and Python Azure Functions. 315 pull requests authored and 184 reviewed, with measurable wins: 50% faster APIs, 80% faster dashboards and sub-300 ms search.

EXPERIENCE

Software Engineer (Full Stack), Skinopathy Inc., Toronto, ON Feb 2023 – Present
Skinopathy OS, an EMR used by dermatology clinics in Canada and Malaysia. Next.js, TypeScript, Go, PostgreSQL, Python, Azure.

- Led prescriptions end to end (~70 PRs): **PostgreSQL** fuzzy and full-text search with **sub-300 ms** queries, then **Prescriptions 2.0** across the EMR and patient portal (no-encounter prescriptions, re-prescribe from history, pharmacy matching, fax-to-pharmacy).
- Built the encounter-note editor and **Slate.js** templater clinicians use during visits (versioning, drafts, favorites, appointment-linked notes), **doubling encounter speed** and cutting documentation from hours to minutes.
- Delivered inventory management and private-pay billing (product catalog, invoice generation), and extended the **Python Azure Functions** OHIP claims service with fee-schedule parsing and claim submission and response handling.
- Rebuilt outbound fax from the patient chart on the **SRFax API** (multi-document bundles, cover letters, clinic sender numbers, multi-recipient sends) and the **react-pdf / pdf-lib** pipeline behind printable chart documents.
- Designed and deployed RESTful APIs in **Go (Gin)** and **PostgreSQL**, reducing API response times by **50%**; built a shared appointment selector and fixed slot logic in the **Go scheduling service**.
- Integrated **Azure Communication Services** into the Go backend without SDK support, delivering encrypted, government-compliant doctor-patient chat and calls.
- Built a thumbnail-generation pipeline for PDF previews stored in **AWS S3**, cutting admin dashboard load times by **80%**.
- Cut **production releases** through 2026 (cycles 16 to 49) across frontend, backend, scheduler and email services, assembled QA branches, and wrote **clinician-facing release notes**.
- Authored **315 PRs**, reviewed **184**, completed **197 tickets**; mentored juniors and worked with product, design and QA to ship major features **15% faster**.

TECHNICAL SKILLS

Languages: Go, TypeScript, JavaScript, Python, Java, SQL, Bash, HTML, CSS

Backend: Gin, Node.js, Express.js, Spring Boot, Azure Functions, REST API design, microservices, Swagger/OpenAPI

Frontend: React.js, Next.js, TanStack Query, Slate.js, Tailwind CSS, react-pdf, pdf-lib

Data: PostgreSQL (full-text and trigram search), MySQL, MongoDB Atlas, SQLite

Cloud & DevOps: Microsoft Azure (Functions, Communication Services), AWS (S3, EC2), Docker, GitHub Actions, CI/CD

Practices: Code review, release management, feature flags, unit testing, Agile, mentoring

PROJECTS & AWARDS

PDF Tools Prototype, Skinopathy interview project Jan 2023

- Built a **React** prototype for PDF page rotation and annotation using pdfjs-dist and pdf-lib; it was later integrated into Skinopathy's production system.

Plate-Saver, DeltaHacks 8, Winner (MyPalate Inc. Challenge) Jan 2022

- Built a full-stack Android app in **Java** and **SQLite** connecting restaurants with shelters for food redistribution, including backend APIs, real-time data sync and UI.

EDUCATION

BSc, Computer Science, York University, Lassonde School of Engineering, Toronto, ON Sep 2018 – Jun 2022

Awards: Lassonde Entrance Scholarship, Student Excellence Scholarship. Activities: Orientation Leader, YUHacks Volunteer, University Tour Guide.
